KORNU SAI GOVINDA RAO

kornusaigovinda@gmail.com | +91 8074025622

EDUCATION

MCA (Master of Computer Application) **Aug-2024**
Dr. Lankapalli Bullayya College CGPA: 8.4
Bachelors of Science in Mathematics **Oct-2021**
Sagar Degree College CGPA: 7.5
Intermediate, MPC **Apr-2018**
Sri Venkata Sai Jr College Percent: 85.4

SKILLS SUMMARY

Languages: Python, TypeScript, HTML, CSS
Frameworks & Web Technologies: Angular, Fast API, Streamlit
Machine Learning & AI: Machine Learning, Deep Learning, Data Analysis, Model Evaluation
Libraries & Tools: NumPy, Pandas, Scikit-learn, TensorFlow, Keras, Jupyter Notebook, Google Colab
Developer Tools: VS Code, PyCharm, MySQL Workbench, Git, Bitbucket
Soft Skills: Analytical Thinking, Problem Solving, Effective Communication, Teamwork

WORK EXPERIENCE

Associate Data Scientist - SpadeCode Intelligence Pvt. Ltd.

April 2025 – Present

- Developed and deployed Machine Learning and Deep Learning models, evaluating performance using industry-standard metrics and building interactive Streamlit applications for model demonstration and usage.
- Conducted end-to-end data analysis for financial reconciliation, mapping and validating transaction data across banking systems, payment gateways, and application databases to ensure payment accuracy and consistency.
- Contributed as a Frontend Developer to an AI-powered Interview & Mock Test platform built with Angular + Ionic, implementing core application logic including user authentication, profile management, dynamic content rendering, and Razor pay payment integration.
- Collaborated closely with Backend and LLM teams to integrate AI capabilities that generate interview questions, evaluate responses, and deliver detailed performance feedback to users.
- Designed and implemented a user performance dashboard with interactive visualizations (bar charts, pie charts) to track progress, strengths, and improvement areas.

PROJECTS

Drone vs Bird Detection & Classification | Link

- Developed an end-to-end computer vision system to distinguish drones from birds in aerial imagery for surveillance and safety applications.
- Built a custom CNN and implemented transfer learning using InceptionV3 to improve classification performance.
- Applied preprocessing, augmentation, and dataset balancing to enhance model generalization.
- Integrated YOLOv8 for real-time object detection and bounding box localization.
- Achieved ~96% accuracy using transfer learning and built a prediction pipeline for unseen images.

AI-Generated vs Real Image Detection | Link

- Developed a deep learning system to detect synthetic images generated by AI tools versus authentic photographs.
- Implemented custom CNN architecture and transfer learning using EfficientNetB0.
- Performed extensive preprocessing, normalization, and augmentation for robust performance.
- Built real-time prediction capability for user-uploaded images.
- Achieved ~91% accuracy and demonstrated effectiveness of pretrained models for authenticity verification.

Loan Approval Prediction System | Link

- Designed a machine learning system to automate loan approval decisions using credit risk analysis.
- Performed extensive EDA, feature engineering, and handled class imbalance.
- Evaluated multiple models including Logistic Regression, Random Forest, and Gradient Boosting.
- Achieved ROC-AUC up to 0.975 and optimized recall to minimize financial risk.
- Deployed an interactive Streamlit application for real-time prediction.

CERTIFICATIONS

Python Basics	:	By Hacker Rank	NumPy	:	By Great Learning
SQL Basics	:	By Great Learning	MS-Office	:	By Samavedha It Solutions
